- * The remote control cannot be used under charging state.

FAQ

warning: Please fully charge it before use.

Q:Why can't the aircraft lights be turned on/controlled by the remote control?

A:Please re-insert the aircraft light to charge, remove the charging cable after 5s , the aircraft light up, and you must use the remote control to switch the color and activate it in 1 minute. Each aircraft light must be activated in 1 minute after removing the charging cable, or the remote control will not work.

Q:Why can't the aircraft lights be controlled after using for a period of time?

A:If the aircraft light has no remote control operation for more than 1 minute, it will enter sleep mode to save power (the aircraft light cannot be controlled by the remote control in sleep mode). We can press and hold "ON"button on the remote to make the aircraft light exit sleep mode. It can be controlled by the remote again.

If it still doesn't work, please recharge and repeat the activation operation.

Q:How to sync aircraft lights

A:please Long Press the static + white light button from remote to sync it.

LED activation

1. Charging port on the back

first,Remove the waterproof plug,insert the charging cable into the LED charging port .Please charge for more than 30 minutes,the indicator light will go out when it's fullcharged.

2. activated in 1 minute

After removing the charging cable, the light will turn on.**we must use the remote control to activate it in 1 minute** , otherwise the remote control will not work.

3. on/off:Long press ON/OFF

Press and hold to turn on/off all the lights, And the remote control will go into sleep if it is not operated in 1 minute, and cannot control the Drone lights, please long press the "ON" to activate it again.
